

How would I pivot into programming if the job market is hard?

AI_GPR

(6/8)

Top programmers are expected to master categories, functors, monoids, monads, and types.

Wait, aren't those all just algebra?

AI_GPR

(7/8)

Freyd classifies Category Theory as an “essentially algebraic theory”¹. Functor and monads are a part of Category Theory.

¹ Journal Australian Math Society

Surely most of programming is about databases or something non-algebraic!

AI_GPR

(8/8)

Edgar Codd defines a database as a Tarski Relational algebra.

Wait, you're not AI GPT, you're *Alg-P.R.*! Are you just a shill trying to convince people all of life is algebra!?
